

Gantner

**Electronic Access, Locker Locking
and Time Recording Systems**
for greater Security and Efficiency

ORGANIZE OPERATIONS CONTROL PROCESSES

Organizing a company means ensuring the necessary security, controlling processes optimally and offering the highest possible level of convenience coupled with maximum efficiency.

GANTNER supports you in organizing your company. Whatever sector you are in – GANTNER has the right solution for your company.

EVERYTHING WITH A SINGLE CARD

GANTNER offers coordinated system solutions for different requirements from a single source. We make sure any desired system expansions can be implemented with ease at any time.

The unequivocal, secure and convenient identification of staff and visitors is of central importance in a GANTNER system.

It does not matter which identification technology is being used (RFID, NFC, BLE, fingerprint or staff number), nor what type of data carrier card, key chain or wristband.

Using a single ID for all applications within a company is not only convenient, it also reduces administration costs.

Fantastic, isn't it?

Via modular expansion,
a GANTNER system can
be customized to match
any client's individual needs –
an investment in
the future.

ELECTRONIC ACCESS SYSTEMS

The well organized and controlled access to company sites, offices and facilities provides security and enhances trust.

In a GANTNER access control system, the multi-functional data carriers or the user's fingerprint replaces the mechanical key.

The administration, issuing and modifying of credentials has never been easier nor more flexible. Sounds easy? It is!

**Secure issuing
of credentials**

**Comprehensive

24/7 availability

Access via chip,
staff ID, PIN code
and/or fingerprint.

NETWORKED ACCESS SYSTEMS

Wired systems offer maximum functionality and security, together with increased cost efficiency.

The wide selection of readers and locks enables the equipment of any door and the compliance with all safety requirements. Gates, lockers and elevators can also be integrated

into the access control system and be conveniently organized via PC. No other system offers such a wide range of applications as a wired access system.

USA pealinnas asub Valge Maja, mille kohal on ilmselt maailma kõige rangem droonikeelutsoon. “

No matter what the requirements may be, GANTNER has the solution – from elegant design readers to functional readers with standard functions all the way to models with expanded security options.

ACCESS SYSTEMS FOR EASY RETROFITTING

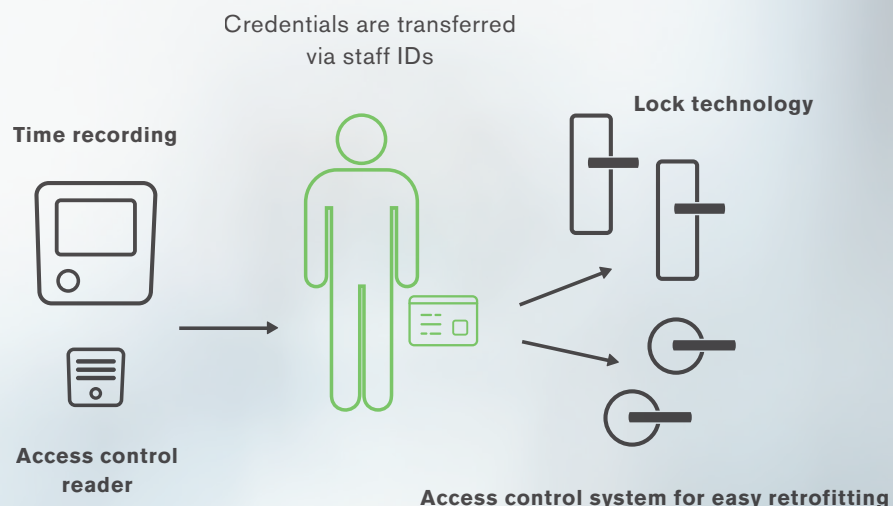

Modern companies adapt their organization to their day-to-day requirements. Space usage or access credentials therefore change frequently.

GANTNER Access solutions allow doors not initially intended to be part of an electronic access solution to be integrated into the system later on. The administration of access credentials can be

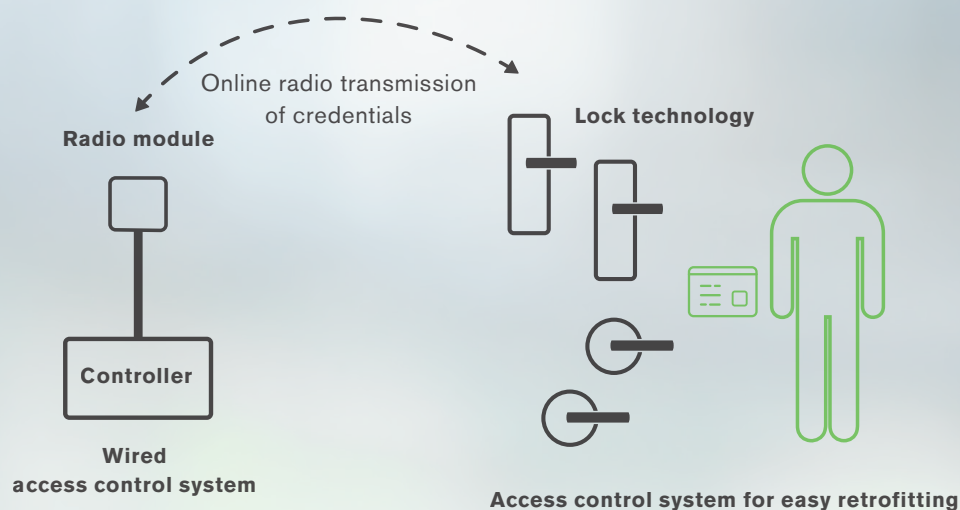

conveniently organized via a central PC, while the GANTNER Access control system automatically manages the credential's data flow in the background.

For both the radio transmission WiNET and the data transmission CardNET, transferring credentials via staff IDs is an available option thereby offering the right solution for every application.

CardNET

WiNET

ACCESS CONTROL FOR HIGH DESIGN DEMANDS

Especially for high-design demands, GANTNER offers sleek, fully integrated and unobtrusive electronic access solutions, so the aesthetics of the building remain untouched.

The electronics are enclosed in the door handle or in the lock case thus enabling the use of any design of door handle or rosette. Readers are fully integrated into the switches or are elegantly hidden behind glass surfaces.

Thanks to inductive charging of the batteries via the door frame, no batteries need to be replaced.

Efficient – isn't it?

**Any door handle design
can be used without
wiring the door.**

SOFTWARE SOLUTIONS FOR ACCESS CONTROL

As every company has different access control requirements, the GANTNER administration software GAT Matrix is modular in design and can be expanded anytime.

Apart from the functionality of a classic locking plan, credentials can be automatically transferred, grouped and controlled in time and space. Interfaces for higher-level employee payroll accounting

software (e.g. SAP) enable the administration of access credentials already in the HR system. GAT Matrix manages the coordination in the background.

Multi-client capability

Clear dashboard

Modular system

ACCESS AND ALARM MANAGEMENT

The **GANTNER** access control system integrates seamlessly into security and facility control systems of renowned manufacturers. You have an overview of open doors, current alarms and their respective handling instructions, and can remotely control the doors.

With GAT Mobile Access, you get the functionality of a security control station on your smartphone. The Anti-Pass-Back software enables the organization of

parking spaces, the controlled order of entries and departures, and functions that support emergency services in the event of an evacuation.

“

GAT Mobile Access puts all the relevant functions for the administration of your access control system on your smartphone.

TIME RECORDING

Efficiency is a matter of time. Transparent time recording and administration are essential to any company.

Modern Time Recording devices do much more than just recording times of presence or absence: they combine time with security and efficiency.

Optional fingerprint readers further increase convenience and fully eliminate the risk of manipulation.

Individually adaptable

Multilingual

Open interfaces

COMBINED TIME RECORDING

Besides displaying general information about the personal time account or special security instructions, access control can play an important role in the access control system.

COMING loggings authorize the data carriers for access, while GOING loggings cancel these cre-

dentials. In terms of security, data carriers are no longer critical and forgotten loggings a thing of the past.

“

There are various interfaces available to integrate GANTNER devices into your time recording software or your HR system (e.g. SAP HR).

LOCKER LOCKING SYSTEMS

Modern storage systems play an important role in a large variety of companies and areas.

Whether you are looking for flexible solutions for storing personal belongings and work documents, or require in-house mail, depot or wardrobe lockers, with the safe and easy to operate GANTNER electronic locker locking system all these applications are easier than ever before.

Clients all over the world trust GANTNER's unique and award-winning locker locking solutions, where keys are replaced by staff IDs.

Intuitive operation

Reduced costs

Efficient administration

END-OF-TRIP FACILITIES

Health awareness and sports activities are not just a trend.

Ever more companies support the sporting activities of their staff and offer the possibility of freshening up in End-of-Trip (EOT) facilities afterwards. After all, only healthy staff can be productive.

Electronic GANTNER locks ensure that personal belongings are kept safe in the meantime. Staff IDs are used as credentials.

“

For those who bike or jog to work, showers and changing rooms must be provided. GANTNER locker locking solutions ensure that personal effects are kept safe in the meantime.

CENTRALLY-POWERED LOCKER SYSTEMS

Do you want to make the best use of the space available, increase the security and flexibility of your locker system and reduce administration expenses at the same time? Nothing is easier with a networked GANTNER locker locking system.

Wardrobe and staff lockers, strongboxes and filing cabinets turn into centrally administrable units, conveniently operated via chip or card. You can quickly decide and alter who should have access to

what. You administrate your access control system conveniently from your PC – why not also your locker system?

Availability 24/7

**Easy modification
of credentials**

Alarm functionality

You decide how the lockers will be used: free, personal or timed. For the highest levels of transparency and security.

BATTERY-POWERED LOCKER SYSTEMS

Battery-operated GANTNER locker locking solutions provide innovative, electronic locker locking systems without any cabling nor cumbersome installation. Retrofitting existing lockers is easy, as existing holes can be used.

The award-winning locks come with various features, e.g. acoustic alarm functions, complete vandalism protection or PIN code keypads.

Thanks to the various lock models, GANTNER can provide the right solution for every requirement.

**Award-winning
solution**

Easy retrofitting

**Battery life
up to 10 years**

Staff IDs serve as
key replacement.
Retrofitting existing
lockers has never
been easier.

CASHLESS PAYMENTS

With contactless chip technology, the cashless payment system will find its way into your company. In the canteen, at the vending machine or the company shop, payments are facilitated via a card or a chip. Easy, convenient, around the clock.

The payment process is quick and as no cash needs to be handled, queueing at the cashier's desk is a thing of the past. Debiting and crediting are

fully automatic, with no staff required. You can also offer your employees or clients special promotions and discounts.

Saves time

No cash handling

Secure and reliable

Crediting and debiting can be performed and have a significant financial impact.

REDUCED STAFF COSTS

With cashless payment systems, all purchases can be easily settled and paid.

Staff members can query and understand their transactions anytime. With a GANTNER system, the staff ID is turned into a convenient and secure

medium for access control, time recording, locker use and cashless payments.

“

**Cashless payments
reduce the staff required
for POS and administration.
Staff IDs are turned into
electronic wallets.**
