

Prefino

Furniture for people

For maximum requirements

There are tasks that only specialists can handle. Furnishing changing rooms, for example. Where the crucial bit of extra space, functionality, and design is needed – that's where Prefino comes into play.

Do you set high demands? Do you value versatility and the option to redesign? Is hygiene especially important in your rooms? Do you need online locking systems that are managed securely and linked neatly? Do you dream of creative room lighting solutions? Then Prefino from C+P – the market leader in changing room furniture – is the right system for you.

Saving space:

The storage box offers locker space that has gone unused until now.

Spas and health resorts

Modern spas and health resorts are designed to offer visitors a wealth of different experiences and are places where everything can be found under one roof: water parks, vitality oases, thermal baths, and saunas, as well as shopping and dining opportunities. Special demands are also placed on the changing rooms – whether this be attractive glass doors or electronic online locking systems. Prefino has the right answer for everything.

Brilliantly furnished:
Mirror face plates with lighting and shelves ensure that the end faces are put to best use.

Sports, fitness, and wellness facilities

The first port of call after check-in: the changing rooms. Appealing and versatile furnishing makes them the face of any facility. Prefino comes out on top with its diverse extra options: flexible configurations, individualized motifs, interesting light moods with integrated room lighting on top of the locker – and much more besides.

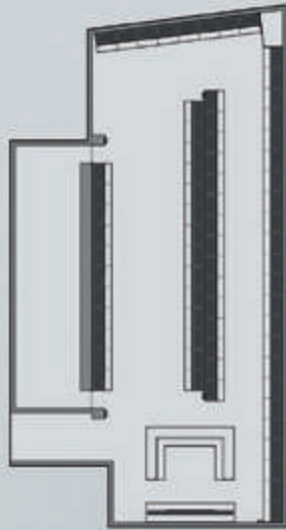

Hospitals and clinics

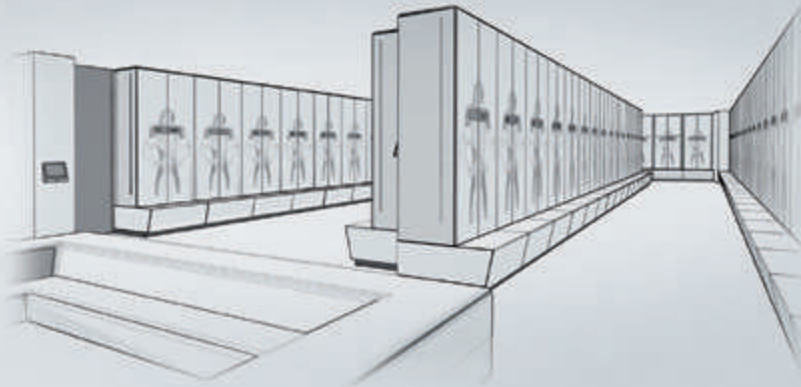

Hygiene, cleanliness, and safety are decisive factors in medicine and healthcare. Be it staff and surgery changing rooms, or patient security compartments: Prefino combines ease of cleaning and decontamination with specific solutions for every field – as well as a wide range of suitable add-on modules.

Refreshing:
Prefino bag lockers with glass fronts, glass cover plates, and integrated drinking water fountains.

2D space plan

3D space plan

Idea. Planning. **Space solution.**

Prefino locker systems do not only fit in perfectly with the entire interior design – they can even help to shape it, and therefore provide an incomparable space experience. With individually controlled room lighting integrated into the top of the locker, for example.

Photo-like visualization

www.cp.de/prefino

C+P offers you practical solutions for creative space planning – from easy-to-use planning tools to animated 3D visualization. You will be amazed at everything you can do with Prefino!

Motifs on request:

Prefino glass doors and face plates are the ideal place for customer motifs, which give the furnishings an unmistakable appearance.

Classy and functional:
 Prefino bag lockers with glass
 fronts and cover plates.

Wellness. Spa. **Prefino.**

A relaxing stay at a wellness center or spa begins in the changing room. You don't get a second chance to make a first impression. That's why a special atmosphere is required here, regardless of the size of the establishment.

Prefino has two main benefits: One is the high-quality design which creates a feel-good ambiance through various shapes, materials, and colors. The other is the functional accessories and fully developed technology, which ensure smooth and convenient use.

Steel/stainless steel

HPL decor

Real-wood veneer

Glass

Glass with printed motifs

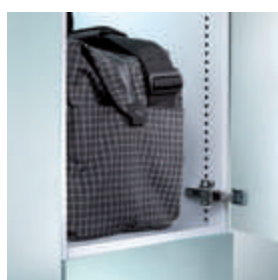

HPL with vectogram

Creative front design:

The sturdy steel system body is the ideal basis for creative door variants in an exceptionally wide range of materials.

Versatile equipment panel:

The sides of the locker can be used for mirror face plates, hairdryer trays, or LED lighting.

Lots of storage space:

Enough room for everything at last! In the 800-mm-deep Prefino bag locker, even a large sports bag can be stored with ease.

Intelligent technology:

Electronic locking system, wireless smartphone charging or sensor-controlled LED interior lighting – the sky is the limit!

Professional technology:
The endface plate as a
billboard with integrated
monitor: the perfect solution.

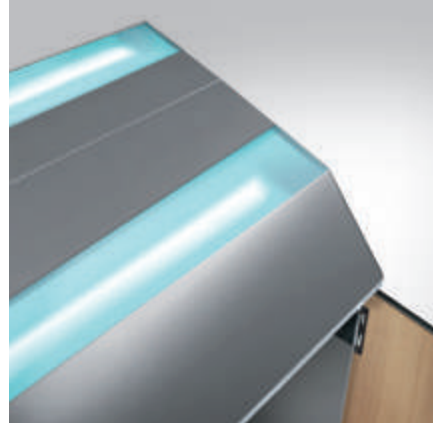

The allrounder:

Variable compartment sizes, LED lighting, and LCD monitor integrated into the mirror face plate – Prefino fulfills every furniture dream.

**Slanted roof:**

Lots of space for functional ideas – from housing necessary ventilation and supply lines to integrated indirect room lighting.

Fitness for the **eyes**

With accentuated and atmospheric lighting, you will create an impression that is second to none. Prefino lockers support you in this!

With the innovative slanted roof, you can confidently leave the entire room lighting in Prefino's capable hands. And this can range from simple, indirect lighting to individually controllable RGB lights which allow you to conjure up any lighting mood you desire. Prefino reveals new dimensions of optical room enhancement!

**C+P double coat hook:**

Oval special wardrobe rail with anti-rotation, sliding double hook. Can support a large load and is very easy to use, with system holder, e.g., for coat hangers or movable partitions.

**Matching benches:**

The benches of the Vitas series emphasize the features in any high-quality environment.

Atmospheric lighting:

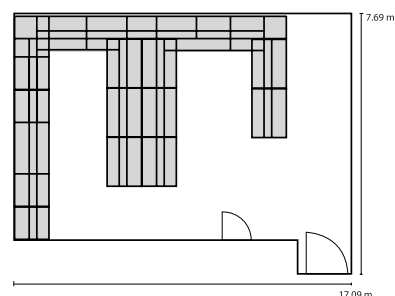

RGB light modules can also be incorporated as an option. Different light moods are created from the three basic colors.

The RGB lighting (red, green, blue), which can be integrated into the Prefino slanted roof, and a control device that mixes the three light colors makes any light mood possible. It is also easy to create various light scenarios at different times of the day. All your visitors will have a sensational experience in your changing room!

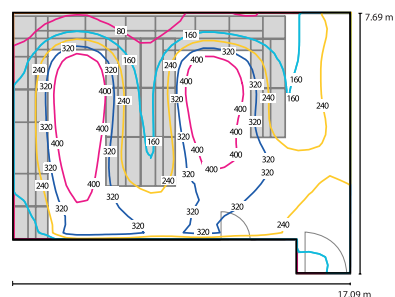

Practical tip

Professional light planning:

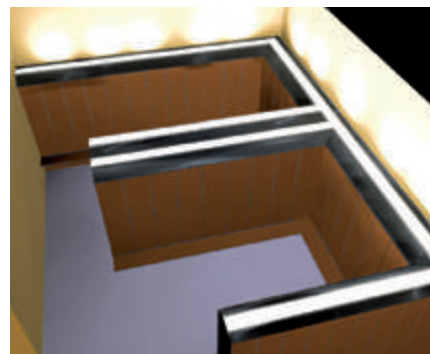

When planning room lighting, different factors as well as legal regulations – e.g., the minimum illumination value – need to be taken into account. Light sources are included in a ground plan.

2D space plan

Light planning (isolines showing the illumination values in lux at every point in the room)

3D space plan (path of light visualized)

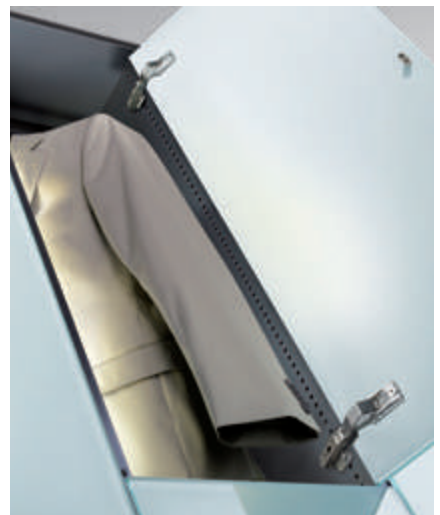

Call in experienced specialists!
C+P is pleased to be able to offer you a professional light planning service.

High tech looks the best:

The Prefino glass door hinges are glued in a force-locking manner to the inside of the color-enameled door. The result: smooth outer fronts for a high-quality appearance.

Numbering and orientation:

Color-coded labeling and pictograms are available to optimize space orientation and numbering.

Have a **seat!**

Depending on a building's design, a variety of different sub-frames can be utilized with locker systems. Prefino is flexible – and therefore well equipped for any challenge.

In addition to the classic foot and base designs, integrated bench solutions are becoming more and more commonplace. Be it overhanging benches on an existing base, benches built in front with shorter doors, or benches with storage boxes underneath: Prefino is the best choice for an ideal outcome.

Benches in front with HPL seat:

This version as well as the variant with storage box underneath can also be retrofitted on request.

All of the sub-frames shown here are very easy to clean, in part thanks to the clear-cut corner solutions. For you, this means extraordinarily sanitary conditions and simple, fast, and therefore cost-effective cleaning. Furthermore, the option with storage boxes underneath offers additional storage space that has generally gone unused – a true added benefit for visitors.

Bench with storage box underneath:

The seat serves as a lid that can be opened only by the user of the locker. It ensures that bags, helmets, and other items can be stored comfortably and removed easily.

For integration with Prefino:

All common mechanical and electronic locking systems up to an online locking system as part of complete building automation.

For effective **clinical hygiene**

Furnishings in clinics and hospitals need to meet high standards of hygiene, especially in intensive care, surgery, or the infections department. Among other requirements, furnishings need to be resistant to disinfectants.

Prefino offers more: Cleaning and decontamination are easy thanks to smooth internal and external locker walls. The zinc-plated and enamel-coated steel body also provides an added benefit in terms of hygiene and cleaning. Inside and outside corner solutions that fit exactly ensure that the locker joints can be kept clean.

Smooth internal walls:

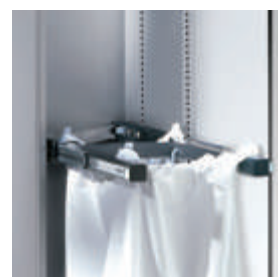

All internal walls are completely smooth – for convenient use as well as effective and easy cleaning.

Swing flap:
Makes loading the laundry
collecting locker easy.

Another issue in hospitals is the fresh laundry supply as well as the handling of dirty laundry. Prefino has the right solution for this too – from dispensing shelves for fresh laundry to laundry collecting lockers with swing flaps for inserting laundry, and laundry bag telescopic pull-outs. Matching assembled box lockers round off this range of products.

Laundry-bag holder:
In standard design with four
sturdy holders (center image)
or available as a comfort holder
with telescopic pull-out, which
makes it easier to remove the
laundry bag.

Assembled box locker:
With three tiers and two adjacent
compartments, compartment
width 400 mm.

Assembled box locker:
With four adjacent tiers,
compartment width 300 mm.

Laundry collecting locker:
With HPL door, top swing flap,
and laundry-bag holder inside.

Dryer following the FVLD concept:

The electronic dryer is stored out of sight in a compartment and dries even wet clothes in just a few hours.

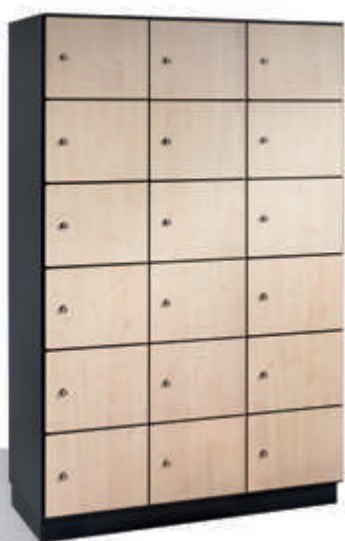

A clean solution

In areas with high hygiene requirements (such as the food industry), locker systems have to meet special demands in many different ways: On the one hand, surfaces need to be smooth and easy to clean. Here, the Prefino steel body with smooth internal walls offers many clear advantages.

On the other hand, connecting to existing ventilation and extraction systems also requires a professional solution. In addition, this also requires suitable supplementary products, such as swing-over benches, over which employees move from the "contaminated area" to the "clean area". C+P offers the perfect range for these furnishing tasks.

Assembled box locker with HPL doors:

The HPL doors are also available in attractive wood decors.

Swing-over bench:

This bench serves as the transition from the contaminated area to the clean space. Street shoes remain on the contaminated side.

Drying system in the technical compartment:

The drying unit is completely integrated into the locker. It can also be programmed and the settings easily changed.

C+P offers you various ventilation concepts that make use of the latest technology – from the self-ventilation concept (SVL) and classic forced ventilation (FVL) all the way up to the forced ventilation concept with drying (FVLD). The drying units are stored in the technical compartments inside the lockers.

Technical compartment with dryer:

The dimensions of the drying and ventilation systems are selected based on the local conditions and drying tasks.

Practical tip

When it comes to ventilation, you should be aware of the following:

Before deciding on a ventilation system, get some advice on the most economical solution for your requirements.

The C+P concepts at a glance:

SVL concept®

Self Ventilation concept (SVL) = effective drying without additional ventilation equipment.

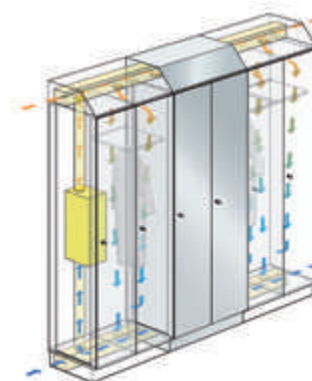

Can be used for 90% of all drying tasks! Depending on the amount of moisture, drying is complete in 6-14 h. The room temperature should be approx. 20° C with a relative humidity of approx. 50%.

FVL concept

Forced Ventilation concept (FVL) = odor removal by means of high air renewal rate and improved drying – implemented with the aid of an on-site ventilation plant.

Can be used where emissions are to be removed and the drying requirements are normal, for instance. Depending on the amount of moisture, clothes dry in 6-14 h. The room temperature should be approx. 20° C with a relative humidity of approx. 50%.

FVLD concept

Forced Ventilation concept with Drying (FVLD) = effective air renewal by means of an electric dryer and additional ventilation equipment.

Can be used where very large quantities of moist clothing must be dried in a short time. Depending on the amount of moisture, clothes dry in a few hours.

There are also further possible solutions for areas with high hygiene requirements (e.g., integrating filter and disinfection systems). We look forward to your project-specific inquiry.

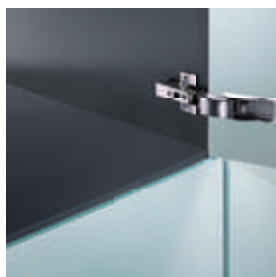

Thoroughly **thought through**

What really makes the difference are the details!
 Prefino has much more to offer than you may think.
 Ingenious and thought through details – typical C+P.

Classy appearance – easy cleaning

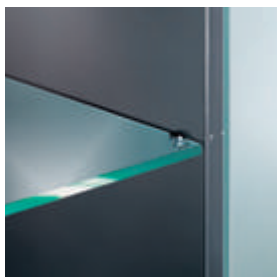

Smooth outer door surfaces:
 Clean locker appearance due to internal hinges – even on glass doors.

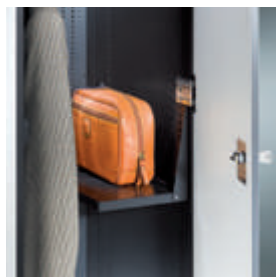

Smooth internal walls:
 Clean and hygienic – for easy cleaning and decontamination.

Equipment examples in the locker

Glass shelves:
 A fine solution: Glass shelves made of 8-mm-thick safety glass (with optional lighting) give the interior even more style.

Foldable tray:
 Space for a multitude of items. And there's still enough room to hang items of clothing at the side.

Safety

Security compartment:
 Instead of the hat shelf. Can be supplied for compartment widths of 300 and 400 mm.

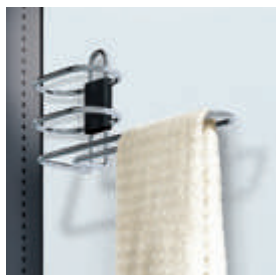

Safe with PIN code lock:
 The sturdy safe is permanently installed and provides safe protection for all valuables.

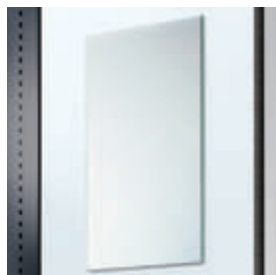

Equipment solutions on the door

Towel holder:
 For compartment width of 300 mm, made of stainless steel, can be supplied for the door inside of steel and decor doors.

Towel / shower gel holder:
 For compartment width of 400 mm, made of stainless steel, can be supplied for the door inside of steel and decor doors.

Mirror:
 Mirror available in two sizes (90x110 or 180x300 mm).

Flip-flop / shoe holder:
 Made of stainless steel, can be supplied for the door inside of steel and decor doors.

Mechanical locking systems

Cylinder lock:

As platelet cylinder, pin cylinder or dimple lock. With master key function and number label if required.

Safety turning bolt:

It is not possible to destroy the locking mechanism by turning it too far as the locking cylinder only engages after the padlock has been removed.

Coin-operated lock:

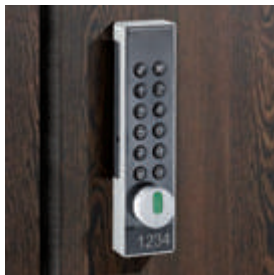

As deposit or token-operated lock with practical twin coin function and as ticket-operated lock.

Electronic offline locking systems

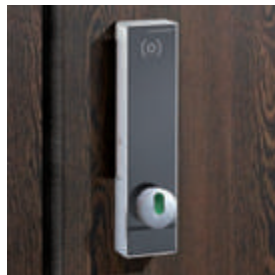

PIN code lock:

The simple solution with freely selectable PIN code. Ideal wherever no keys or data carriers are to be used.

PIN/RFID/NFC lock

Variable locking system with different operating options – from PIN code to transponder to NFC technology.

RFID lock:

Electronic locking system with button function and various options for data carrier integration.

Electronic online locking systems

GAT-Lock 5010 with central information terminal:

While the compartment can be opened directly at the locker, the central display serves to provide information about the lockers that are occupied and that are free.

METRA locking system with central control unit:

The compartment is opened from the central control unit – either using a data carrier or a PIN code.

RFID = Radio Frequency Identification (using a transponder)

NFC = Near Field Communication (transmission standard for contactless exchange of data)

An ingenious **combination**

C+P supplies a large range of coatings and surfacing options as standard. We shall also be glad to supply custom color and surfacing solutions. You will find the full range and additional information on color options in the current catalog. Have fun choosing!

Body and door colors:

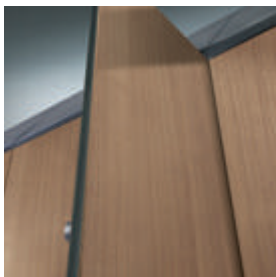

Along with the classic body colors of white aluminum and black gray, many further options are available with Prefino.

Door designs

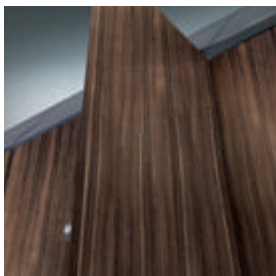

Steel doors:

Double-walled and insulated, in the classic elegance of an unrivaled material.

HPL doors:

Made of high-pressure laminate, 13 mm thick, and available in a variety of appealing decors.

Doors with real-wood veneer:

The right choice for a sophisticated ambiance

Glass doors:

Classy door design made of 8-mm-thick, color-enameled safety glass.

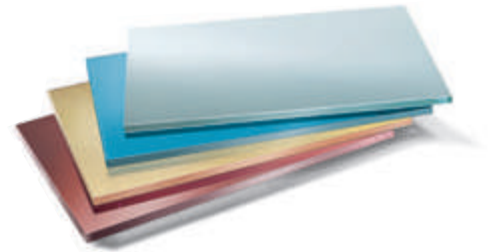

HPL decor fronts:

Modern decor options are available for the HPL fronts and face plates.

Real-wood veneers:

The perfect choice for representative areas. A wide range of current veneers to choose from.

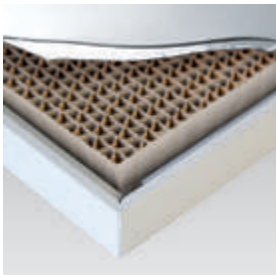

Glass colors:

Doors made of color-enameled glass with a shiny or matt front.

Steel doors

Double-wall doors with insulation; sandwich construction with good sound absorption.

New door opening limiter 90°:

Made from special heavy-duty, plastic-coated stainless steel cable. Standard design for all steel and decor doors.

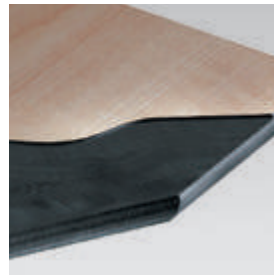

Door hinge made of stainless steel with plastic cover for steel doors.

HPL doors

The top of the Prefino range is represented by the variant with doors of HPL (high pressure laminate). These doors also have doorstop silencers.

The peripheral rounded edge shows the highly compressed, anthracite, solid-core material of the HPL top.

New door opening limiter 90°:

Made from special heavy-duty, plastic-coated stainless steel cable. Standard design for all steel and decor doors.

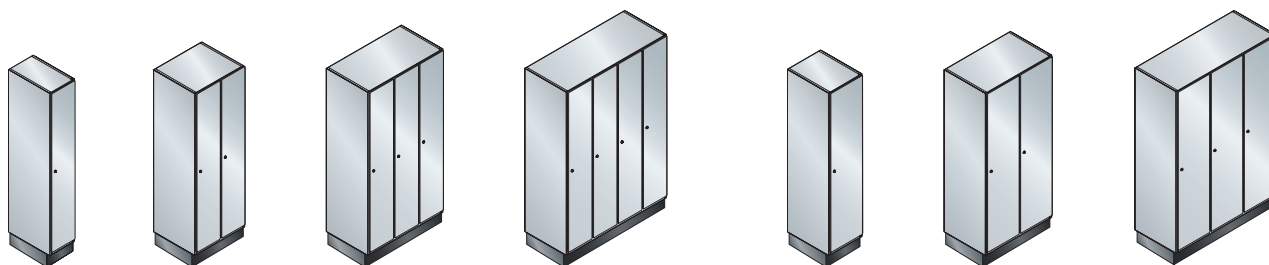

Door hinge of stainless steel for decor doors.

The choice is yours.

You will find the right solution for any application in the Prefino range. Because we place great value in variability. And we are certain that we have just the right solutions for you too!

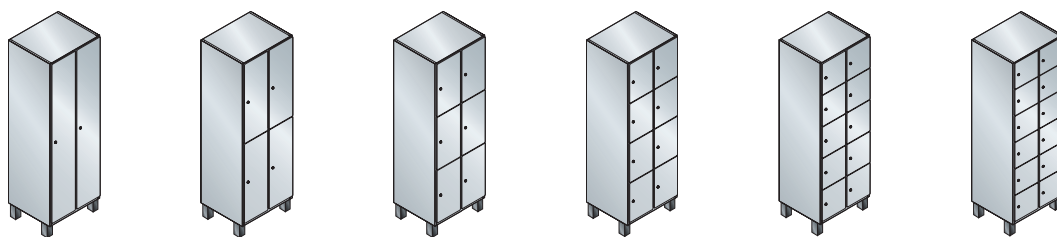

Your C+P advisor will be glad to provide you with more information and show you the optimum solution for your installation.

The Prefino series from C+P is available...

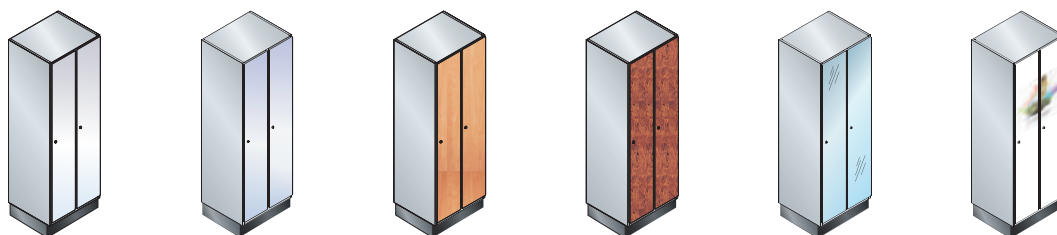

...in compartment widths

of 300 or 400 mm, with one, two, three or four compartments (compartment width 400 mm up to three compartments).

...in different variants

with continuous doors and two, three, four, five or six tiers.

...with various front and door options

e.g. in steel or stainless steel, in wood decor or real-wood veneer, enameled in glass or individually with printed glass design, or in HPL with carved vectogram.

Plan your furniture

The **pCon.planner** and the C+P data package in OFML standard enable you to plan your projects professionally and creatively. Take advantage of this – from ground plans to photo-like images:

- Free to download – professional planning
- Easy and intuitive to use
- Numerous online catalogs to choose from
- Photo-like images

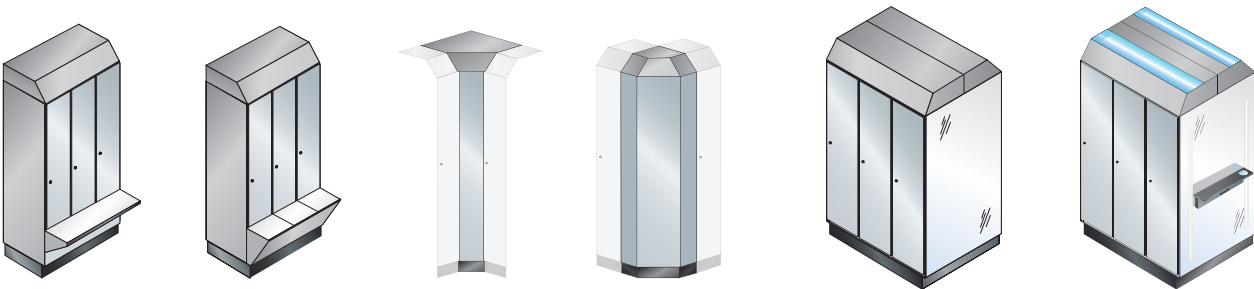

For more information, visit:

www.cp.de/ofml

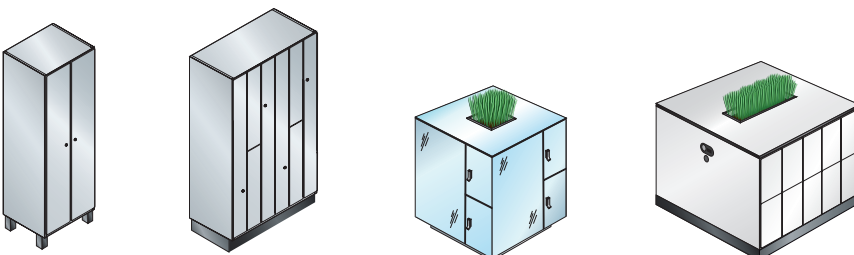

...in various installation designs

on feet or with a base, wall-mounted, or on an existing base.

...with sub-frames, corner solutions, panels, and slanted roofs

with built-in bench, storage box, panels for inside and outside corners, mirror face plates or equipment panels for the ends of locker rows, as well as slanted roofs with or without lighting.

...as custom solutions

e.g., with doors closing in the middle, with security compartment, as a Z locker, or for special tasks as a "communication island", or as a bag locker.

Incidentally:

C+P is the specialist in tasteful and efficient furnishings and fittings made of steel. We have been specializing in the field for decades. So it is no wonder that our customers have enabled C+P to become the market leader in numerous product segments.
